

PECUNIT STREET
WATER TREATMENT FACILITY

In the next couple of weeks the Town of Canton will bring its new Pecunit Street Water Treatment Facility on line. On September 16, 2009, the facility passed the Massachusetts Department of Environmental Protection's inspection.

With this final written approval and the synchronization of all the controls and filtration systems, we will turn on Wells 11, 14 and the facility will begin supplying the Town of Canton with just under one million gallons of water per day.
